BASIC PRESS INFORMATION

Audi at the Kaluga site

In 2016 Audi assembled the models Audi A6, Audi A7, Audi A8 L and Audi Q7 at the site in Kaluga, Russia. In the semi-knocked down (SKD) process, the automobiles are first fully assembled at Audi's plant in Neckarsulm, Germany. They are then partially dismantled before the SKD kits are transported by rail to Kaluga. Assembly is carried out by Volkswagen Group RUS in accordance with the technical and quality specifications of AUDI AG. Audi has been assembling SKD kits in cooperation with Volkswagen Group Rus at the plant in Kaluga since 2009.

The Volkswagen plant in Kaluga is approximately 170 kilometers southwest of Moscow. Since 2007, VW and Škoda models have been assembled here from completely-knocked down (CKD) kits. CKD assembly at the Kaluga plant comprises – as well as the assembly line – a paint shop, a body shop and since 2015 also local engine production. In the context of the localization strategy, the proportion of locally produced components has steadily increased in recent years.

In addition to CKD assembly, the plant also has an SKD assembly area. Not only the Audi models, but also other models from the Volkswagen Group are assembled here.
